The Official Execution Playbook For Ayusyntax

Author:
Sharva Desai: Principal Co-Founder & Head of Operations, Ayusyntax
Prajwal Prashanth: Co-Founder & Head of Development, Ayusnytax
Surya Kappagantula: Co-Founder & Head of Marketing/Product, Ayusyntax

Date: October 2026 (10th Grade)

Executive Summary & Vision: How Ayusyntax Operates

Ayusyntax is an international health-technology venture organized as a U.S. 501(c)(3) non-profit partnered with an Indian Section 8 non-profit corporation. Our mission is to bridge fragmented healthcare networks across India by providing secure, modern, digital infrastructure to clinics and hospitals.

Operational Blueprint & The Two-Phase Model

1. **Phase 1 (The Free Informational Hook):** We build public-facing, static websites for local clinics completely free of charge. These sites handle zero patient data, displaying only doctor directories, clinic hours, and health awareness content. This eliminates security liabilities while building trust and local reputation.

2. **Phase 2 (The Enterprise-Grade Zero-Knowledge Router):** When deploying advanced features (scheduling, patient intake, ABHA digital health ID integration), Ayusyntax acts strictly as a data router, not a warehouse. Data is encrypted client-side on the patient's device before hitting any server. Keys remain with the hospital and patient. Routing nodes run on localized enterprise cloud infrastructure (AWS/GCP India regions) to comply with India's Digital Personal Data Protection (DPDP) Act and the Ayushman Bharat Digital Mission (ABDM).

Corporate Governance & Division of Labor

- **Head of Operations & Business Strategy (Me):** I lead international legal compliance, hospital partnerships, stakeholder management, brand strategy, and the Advisory Board. I conduct on-site deployment sprints in India during my school breaks.
- **Chief Technology Officer (Prajwal):** Leads software engineering, zero-knowledge encryption architecture, ABDM/HL7 FHIR API integrations, and code deployment.
- **Engineering Team:** Developers need to be recruited
- **Advisory Board (Consultants):** My uncles including an orthopedic clinic owner (pilot site for ABDM "Scan & Share") and the director of a major Ayurvedic hospital chain (enterprise integration play) and local Indian leadership.

1.Establish U.S. Corporate Foundation & IRS 501(c)(3) Status: Target Timeline: September 2026 – January 2027.
To legally operate as a U.S. non-profit and issue tax-deductible receipts to donors or sponsors, I must incorporate Ayusyntax domestically.

1. **Draft Articles of Incorporation:** File Articles of Incorporation with the State Secretary of State. Name the entity **Ayusyntax Inc.** State explicitly that the organization is organized exclusively for charitable, educational, and scientific purposes under Section 501(c)(3) of the Internal Revenue Code.

2. **Appoint an Initial Board of Directors:** Establish a board of at least 3 individuals (e.g., trusted adult advisors, mentors, or parents, as minors cannot sign legally binding corporate documents in most states without an adult co-signatory or adult board officers).

3. **Obtain an Employer Identification Number (EIN):** Apply online via the IRS website to get an EIN instantly for bank account setup and tax filings.
4. **Draft Corporate Bylaws & Conflict of Interest Policy:** Adopt formal bylaws governing meeting cadence, voting rules, and strict policies preventing private insurance or financial conflicts of interest.
5. **File IRS Form 1023 or 1023-EZ:** Apply for official federal tax-exempt status. If projecting annual gross receipts under $50,000, file Form 1023-EZ online via Pay.gov ($275 user fee). Include specific narrative language confirming that international grantmaking and activities will retain expenditure responsibility and strict control over funds.
6. **Open a Non-Profit Business Bank Account:** Bring the state approval, EIN, and bylaws to a bank to establish an official Ayusyntax account.

2.Form the Indian Subsidiary (Section 8 Company): Target Timeline: November 2026 – February 2027.
Because a foreign non-profit cannot directly run operations or hire locally inside India without an established footprint, we form an Indian sister organization.

1. **Appoint the Resident Director:** Fulfill the legal requirement of the Indian Companies Act by appointing my resident uncle as a promoter and Resident Director (present in India for at least 182 days in the preceding calendar year).
2. **Obtain Digital Credentials:** Have my uncle apply for a Digital Signature Certificate (DSC) and Director Identification Number (DIN) through the Ministry of Corporate Affairs (MCA) portal.
3. **File via the SPICe+ Portal:** Submit the online incorporation application (Form SPICe+ Part A and Part B) on the MCA portal to reserve the name **Ayusyntax Foundation** (or

Section 8 equivalent) and apply for the corporate license under Section 8.

4. **Notarize and Apostille U.S. Documents:** Ensure all U.S.-side documents (U.S. Articles of Incorporation, board resolutions authorizing the Indian entity) are notarized and apostilled via the state Secretary of State before sending them to India.

5. **Establish Local Bank & Tax Registrations:** Obtain the PAN, TAN, and open a local bank account in India for the Section 8 company upon approval.
6. **Setup FCRA Compliance & Cross-Border Frameworks:**Target Timeline: January 2027 – March 2027.

To move capital, medical devices, or technology licenses legally between the U.S. 501(c)(3) and Indian hospitals or our Section 8 subsidiary, strict compliance rules must be satisfied.

1. **Execute a Cross-Border Data & Grant Agreement:** Draft a formal agreement between Ayusyntax U.S. and Ayusyntax India/partner hospitals specifying "Expenditure Responsibility." This mandates that all transferred resources are strictly used for non-profit charitable medical technology deployments.

2. **Verify FCRA Clearances for Partner Hospitals:** Audit all partner hospitals (including my uncle's Ayurvedic chain) to confirm they possess an active Foreign Contribution Regulation Act (FCRA) registration with the Ministry of Home Affairs (MHA).

3. **Enforce the SBI New Delhi Rule:** Confirm that any foreign grants or hardware donations flow strictly into the partner hospital's dedicated FCRA account at the **State Bank of India (SBI), Main Branch, New Delhi**.

4. **Institute OFAC Screening:** Establish a software compliance protocol that screens all international vendors, board members, and hospital administrators against U.S. Office of Foreign Assets Control (OFAC) watchlists.

4.Build Engineering Sub-Teams & Development Pipeline: Target Timeline: October 2026 – Continuous.

Prajwal and I organize our team of student developers to build the core architecture while enforcing clean code management.

1. **Establish GitHub Repository Governance:** Create an Ayusyntax GitHub Organization. Set up strict branch protection rules: main branch requires Prajwal's code review and automated passing tests before merging.
2. **Divide Engineering Sub-Teams:**

    - **Frontend & Static Team:** Builds clean, fast, responsive static sites (Phase 1) for local clinics using modern web frameworks.
    - **Security & Router Team:** Builds the client-side Web Crypto API pipeline, ensuring zero-knowledge encryption before data leaves the browser.
    - **ABDM/Integration Team:** Maps APIs to the Ayushman Bharat Digital Mission (ABDM) sandbox using HL7 FHIR standards

3. **Set Up Local Cloud Infrastructure:** Deploy development and staging environments strictly on AWS or GCP servers located physically within India (AWS Mumbai/Hyderabad regions) to comply with data localization requirements.

4. Deploy Phase 1 & ABDM Pilots During School Breaks: Target Timeline: Winter Break 2026 – Summer Break 2027.

I utilize my high school academic breaks to conduct on-site operational deployment sprints in India.

1. **Winter Break Sprint (The Pilot Launch):**
    - Build and publish the free Phase 1 static site for my uncle's orthopedic clinic.
    - Install the ABDM "Scan & Share" QR code banner at the clinic reception desk.
    - Train clinic staff on accepting patient demographic shares via the ABHA app, benchmarking intake time reductions.
    -
2. **Spring Break Sprint (The Ayurvedic Integration Audit):**

    - Audit the Electronic Health Record (EHR) needs of my uncle's Ayurvedic hospital chain across its regional locations.

    - Test cross-compatibility between Western orthopedic intake data and traditional AYUSH diagnostic charts on the Ayusyntax router.

3. **Summer Break Sprint (Enterprise Scaling):**
    - Lead formal board pitches to external hospital networks arranged by my outreach-focused uncle.
    - Present live performance metrics from our pilot sites (e.g., 80% reduction in patient registration friction, zero data liability).

6 .Execute Long-Term Governance & Institutional Transition: Target Timeline: Senior Year (2028–2029).
We ensure Ayusyntax transitions into a permanent, self-sustaining enterprise.

1. **Execute Asset Transfer & Restructuring:** Transfer the operational governance of the core architecture and the Indian Section 8 entity directly to my uncle's healthcare network and established local leadership.
2. **Establish Software Licensing & Retainer Agreements:** Replace traditional non-profit stock with a long-term technology licensing agreement. The Indian entity pays ongoing IP licensing fees and consulting retainers back to our team for continuous platform maintenance.
3. **File IRS Dissolution / Asset Transfer:** Legally wind down or convert the U.S. 501(c)(3) entity by transferring all software assets to the Indian Section 8 non-profit in full compliance with IRS Form 990 rules.
4. **Promote Next-Gen Leadership:** Transition day-to-day operations to senior team members while Prajwal and I assume permanent "Founders Emeritus" and Board Director roles now that we are 18.

Operational Summary Table

Milestone	Key Action Items	Compliance & Legal Anchor
U.S. Setup	File Articles, obtain EIN, submit IRS Form 1023-EZ, open bank account.	IRS 501(c)(3) Code

India Setup	Assign Resident Director (Uncle), get DSC/DIN, file SPICe+ for Section 8.	India Companies Act (2013)
Cross-Border	Draft Expenditure Responsibility Agreement; verify SBI New Delhi FCRA accounts.	FCRA 2020 Amendments
Tech Stack	Zero-knowledge client-side encryption, HL7 FHIR APIs, localized AWS India cloud.	DPDP Act 2023 & ABDM Framework
Execution	Deploy Phase 1 static sites & ABDM "Scan & Share" during winter/summer sprints.	On-site Clinical Audits
Transition	Transfer Section 8 governance to hospital network; lock in IP licensing model.	IRS Asset Transfer Rules
